

The Mathematically Connected Communities – Teaching Effectively for All in Mathematics (MC²-TEAM) model is designed in partnership with mathematicians, math education specialists, researchers, and practitioners from across New Mexico (NM). The MC²-TEAM model builds the capacity of partner school districts to effectively implement the Common Core State Standards for Mathematics (CCSS-M). Effective implementation means a) all students actively engage in rich mathematics content and the CCSS-M Standards for Mathematical Practice; b) all teachers of mathematics collaborate in teams with other teachers to develop their math content knowledge and teaching practice; c) the stakeholders (district administrators, principals, teachers, students, and parents) are able to articulate the expectations of the district’s K-12 mathematics program and actively assess and modify what is or is not working to support student and teacher learning.

School and district teams will participate in a 2-year cycle of sustained mathematics professional learning including:
